

Bootstrap & CSS Cheat-Sheet

The Reserve project · every class used, what it does, and what it looks like on the page. Keep this open beside your editor.

1. Layout & Grid — (Task 1: the menu grid)

Bootstrap's grid divides each row into 12 invisible columns. You choose how many of the 12 each item should span, and at which screen size.

Class	What it does	What you SEE
container	Centred, fixed-width wrapper with side padding.	Content sits in a neat centred column, not edge-to-edge.
container-fluid	Full-width wrapper.	Stretches the whole browser width (used in the navbar).
row	Starts a horizontal grid row for columns.	A line that its col-* children sit inside.
g-4 / g-3 / g-5	Gutter (gap) between grid columns. Bigger number = more gap.	Space between the menu cards / form fields.
col-12	Span all 12 columns = full width.	Item takes the whole row (default on phones).
col-md-4	Span 4 of 12 (one-third) on medium screens & up.	3 cards sit side-by-side on a laptop.
col-md-6	Span 6 of 12 (one-half) on medium & up.	2 items per row (Name + Email in the form).
col-lg-6 / col-lg-7	Half / just-over-half width on large screens.	About text and image share the row on desktop.
order-1 / order-2	Set the display order of grid items.	Decides which column comes first.
order-lg-2	Change the order only on large screens.	Image is below text on mobile, beside it on desktop (About).

2. Flexbox & Alignment — (Task 2: the footer)

Flex utilities line items up in a row or column and control their spacing and alignment. Used heavily in cards, the navbar and the footer.

Class	What it does	What you SEE
d-flex	Make the box a flex container.	Its children line up in a row.
d-block / d-none	Force show as block / hide completely.	Element appears on its own line / disappears.
d-md-block / d-none d-md-block	Hidden on small, shown medium & up.	Decoration shows only on bigger screens.
flex-column	Stack flex items vertically.	Items go top-to-bottom instead of left-to-right.
flex-sm-row	Switch to a row from the small breakpoint up.	Hero buttons stack on phones, sit in a row on tablets+.
flex-wrap	Allow items to wrap to the next line.	Footer links drop to a new line if they run out of room.
justify-content-center	Centre items along the main axis.	Buttons / links sit in the middle.
justify-content-between	Push items to the two ends.	Dish title on the left, price on the right.
justify-content-end / -md-end	Push items to the end (right).	Nav links / footer icon align right.

Class	What it does	What you SEE
align-items-center	Centre items on the cross axis.	Logo icon and text line up vertically.
align-items-baseline	Align items on their text baseline.	Title and price sit on the same line.
gap-2 / gap-3 / gap-4	Space between flex items.	Even gaps between buttons / links / icons.
text-center	Centre the text.	Headings and labels are centred.
text-md-start / text-md-end	Left- / right-align from medium up.	Footer column 1 left, column 3 right on desktop.

3. Spacing (margin & padding)

Pattern: {property}{side}-{size}. *p* = padding, *m* = margin. Sides: *t* top, *b* bottom, *s* start/left, *e* end/right, *x* left+right, *y* top+bottom. Size 0–5 (and 'auto'). Add a breakpoint like *md* for screen-specific spacing.

Class	What it does	What you SEE
py-5 / py-4 / py-3	Padding top & bottom (vertical breathing room).	Tall, airy sections.
px-3 / px-5 / px-lg-5	Padding left & right.	Content kept off the screen edges.
pt-2 / pb-1	Padding on just the top / bottom.	Fine-tunes one side only.
mb-1 .. mb-5	Margin below an element.	Vertical space under headings/paragraphs.
mt-2 / mt-3 / mt-5	Margin above an element.	Pushes an element down.
ms-md-3	Margin on the start (left) from medium up.	Space before the Book Now button in the nav.
m-3	Equal margin on all four sides.	Even space around the modal close button.

4. Sizing

Class	What it does	What you SEE
w-100 / h-100	Width / height = 100% of the parent.	Image or button fills its container.
fs-1 .. fs-5	Font size (1 = biggest heading, 5 = small).	Bigger / smaller icons and text.
small	Smaller secondary text.	Fine print, captions.

5. Typography & Colour utilities

Class	What it does	What you SEE
<code>text-white</code> / <code>text-white-50</code>	White / 50%-faded white text.	Readable text on the dark footer & hero.
<code>text-dark</code> / <code>text-muted</code>	Dark / greyed-out text.	Body text / less important notes.
<code>text-secondary-emphasis</code>	Soft secondary text colour.	About paragraphs.
<code>fw-light</code>	Light font weight.	Thinner, elegant paragraph text.
<code>fst-italic</code>	Italic text.	Tagline / dish descriptions.
<code>text-decoration-none</code>	Remove the underline from links.	Clean, button-like links.

6. Borders, corners & shadow

Class	What it does	What you SEE
<code>border</code> / <code>border-0</code>	Add / remove a 1px border.	Outline box / borderless card.
<code>border-top</code> / <code>border-bottom</code>	Border on one edge only.	Thin divider line above/below a section.
<code>border-white</code> / <code>border-dark</code>	Set the border colour.	Outlined hero button.
<code>rounded</code>	Rounded corners.	Softer image / panel edges.
<code>shadow-lg</code>	Large drop shadow.	Image / modal appears to lift off the page.

7. Components & positioning

Class	What it does	What you SEE
<code>navbar</code> , <code>navbar-expand-md</code>	Responsive nav bar that collapses below md.	Full menu on desktop, hamburger on mobile.
<code>navbar-toggler</code> / <code>collapse</code>	The hamburger button / the hidden menu.	Tap to open the mobile menu.
<code>btn</code> , <code>btn-link</code>	Base button / link-styled button.	Clickable buttons.
<code>modal</code> , <code>modal-dialog-centered</code>	Pop-up dialog, vertically centred.	Booking form floats over the page.
<code>btn-close</code>	Standard close (×) button.	Closes the modal.
<code>fixed-top</code>	Pin element to the top of the viewport.	Navbar stays on screen while scrolling.
<code>position-relative</code> / <code>-absolute</code>	Positioning context / precise placement.	Overlay and decorative box sit where wanted.
<code>img-fluid</code>	Responsive image (max-width:100%).	Image scales down, never overflows.
<code>bi</code> <code>bi-*</code>	Bootstrap Icons (e.g. bi-cup-hot-fill).	The little icons (cup, envelope, arrow).

8. The Reserve's OWN classes (defined in css/styles.css)

These are custom — not Bootstrap. They give the site its brand look.

Class	What it does	What you SEE
font-serif	Apply the EB Garamond serif font.	Elegant headings.
label-caps	Small, spaced, uppercase label.	The tiny 'SIGNATURE EXPERIENCE' tags.
text-mahogany	Brand accent colour (#894e47).	Reddish-brown highlights.
btn-mahogany	Solid brand button + hover lift.	The main brown 'Book a Table' button.
btn-outline-custom	Outlined button that fills on hover.	Secondary 'Explore Menu' button.
section-spaced	Big top/bottom margins.	Generous gaps between sections.
divider-line	Short centred accent line.	Little line under section headings.
menu-card	Menu item wrapper + image zoom on hover.	Card whose photo gently zooms on hover.
menu-img-container	4:5 fixed-ratio image frame.	All dish photos are the same neat shape.
menu-title / menu-price / menu-desc	Dish name / price / description styles.	Title, mahogany price, italic grey description.
form-floating-custom	Floating-label input wrapper.	Label lifts up when you type.

9. Footer skeleton classes (Task 2 — YOU style these)

These classes are in the HTML already but have NO styling yet. Writing their CSS is your Task 2. See SECTION 15 of [css/styles.css](#).

Class	What it does	What you SEE
site-footer	The whole footer band.	(You make it dark with padding.)
footer-grid	Wrapper for the 3 footer columns.	(You turn it into a flex row.)
footer-brand / -center / -contact	The three footer columns.	(You align them left / centre / right.)
footer-links	The row of text links.	(You space them and add hover colour.)
footer-social	The mail icon link.	(You make it a circle that fills on hover.)
